Hollywood's 66 Chevelle

Message from Our PCCC President

WOW where did the time go? Here we are in October already? We had a very hot and humid summer but still got in quite a few events. Now that the weather is getting cooler (Yesterday was only 89) a lot of events are coming up in October November and December, Cruise ins, Car shows, Parades and quite a few Club events as well. As a club we are growing in membership and attendance at these events. I have been told many times that "PCCC has made this cruise in or show possible because of our attendance." I think that is a great compliment and shows that we indeed have a great club. I would like to give kudos to all that helped make the annual fish fry a huge success, thank you to all the cooks and the organizers and everybody that attended. I would like for everyone to keep a few of the club members in your prayers and thoughts as they are dealing with certain illnesses and difficulties. For now I wish you all a great fall and hope to see you at some of the events coming up especially the parades, they are so much fun and the public really enjoys our classics.

Thank you, Dave Smith

The October 2019 Business Meeting Is Scheduled on *Monday October 28, 2019*
Advance Auto Store Support Center-University Building
4709 Hargrove Rd, Raleigh, NC 27616

PCCC OUTINGS - Dave Peedin Tour Director

CRUISE TO WILSON, NC / PARKER's BBQ

On October 5th, for those of you who would like to join, we will be cruising to Wilson for lunch at Historic Parkers BBQ. Many of you may have eaten there before but if not, you've missed out on some of the best Southern Style BBQ, Chicken, and all the fixings in the South. Parkers have been in business as long as I can remember. Tourists traveling up and down I-95 have been stopping by here for lunch or dinner for years. We have reservations at 11:30.

From there we will visit the famous "Whirligig Park" a few blocks away. It's certainly a sight to behold. An older gentleman and local resident designed and built each one of these totally functioning pieces by hand. Unbelievable imagination and art work.

From there, we may (if majority would like to) take a stroll back down business 301 South to Kenly and stop at the "Tobacco Farm Life Museum" for a tour celebrating a way of life back in the farming days. It's an enjoyable and educational tour and many of you may remember or have family members that connect to this life style from many years past.

Note # 1 - We will meet at the Walmart - 7106 Knightdale Blvd by 10:15 and leave by 10:30.

Note # 2 - Weather permitting, Drive your Classic Car - Preferred but not required.

Come hungry !!

Classic Car Trivia—Automotive Paint History

In the early 20th century, automobiles were hand painted just like how horse-drawn carriages were painted. The paint used in those times were natural-based such as linseed oil and natural pigments. The painting process was tedious because brush application of multiple coats was required and painted cars took days to dry.

DuPont greatly improved the automotive paint system in 1923 when they developed nitrocellulose lacquer paints and primers to speed application and dry time to a week or less. Spray guns were used to apply this type of paint and it helped speed up vehicle assembly time. This helped cut down the time required to paint a car but it still required labor-intensive and time-consuming hand rubbing to make the paint finish shiny. Lacquers have poor resistance to certain petroleum-based solvents. Repeated exposures to gasoline spills could damage lacquer finishes.

In the 1930s, the alkyd enamel paints were introduced to the automobile paint technology. Enamel paints were generally a thicker material which required fewer coats. This type of paint formed a very durable film after they were sprayed on the vehicle and were baked in an oven. The cured paint film was very resistant to solvents like gasoline. Enamels were quicker to apply which only takes 2 to 3 steps while 3 to 4 steps for lacquers. The downside of alkyd enamel was when it's oxidized in sunlight, the colors will fade or look dull quickly sometimes just within a few months.

In the early 1960s, acrylic enamels were introduced. It improved the durability of enamel finishes. They offered much-improved durability and a wider range of bright and beautiful colors mostly metallic. In the late 1970s, a new type of finish was developed and it was called basecoat or clear coat. It was basically a pigmented enamel basecoat followed by an ultra-hard and clear enamel finish.

By the late 1980s to 1990s, refinements in the paint technology helped reduce costs and the basecoat paint system became widespread. Aside from the high cost, another issue with the basecoat paint system was the peeling clear coats of many vehicles which resulted in many cars and trucks being repainted through factory warranty claims.

In 2014, monochromatic white, black, and grey became popular. Today, there are lots of paint systems as well as colors to choose from. From 2015 up to the present time, we can now see cars in natural earth tones, bright colors, pastels, reds, greens, plums, indigo blues, and many more.

Water-based acrylic polyurethane enamel paint is currently the most widely used paint for reasons including reducing paint's environmental impact. Lead, chromium and other heavy metals were used in automotive paint. Environmental laws have prohibited this, which has resulted in a move to water-based paints. Up to 85% of lacquer paint can evaporate into the air, polluting the atmosphere. Enamel paint is better for the environment and replaced lacquer paint in the late 20th century.
